Experience

QuotaClimat (Capstone) — *Amsterdam, Netherlands (Remote)*

TECHNICAL LEAD & ML ENGINEER — *Feb. 2026 – Jun. 2026*

- Led a 5-person team building a media-framing tool behind QuotaClimat's regulatory filings to French regulator ARCOM; scoped the product, set targets with the partner, and beat the existing keyword-based classifier.
- Owned the architecture and deployed it end-to-end: session-parallel Python scraper with rate-limit handling and session rotation (~2k articles/hr, horizontally scalable), SQL database, React/Next.js frontend in TypeScript, Docker deployment.
- Collaborated on distilling GPT-5-mini labels (validated against human annotators, bias-corrected with prediction-powered inference) into two multilingual XLM-RoBERTa classifiers on ~20,000 articles from 781 outlets; tested languages within ~11% of the French baseline (F1 macro 0.82).
- Presented via interactive live demo; placed 2nd for the Environmental Award.

Twin AI — *Amsterdam, Netherlands*

FORWARD DEPLOYED ENGINEER — *Nov. 2025 – Feb. 2026*

- Led the pre-launch build of Twin AI's AI presentation-generation product for a major international food producer (sales across 100+ countries) as primary technical contact, owning the product from discovery and requirements through architecture and build.
- Automated a ~4-5 hour manual workflow into on-demand generation: pulled prospective-partner data from several company sources, suggested products to pitch, devised key partnering points, and auto-populated the presentation template.
- Ran weekly release cycles and client demos; made the build-vs-extend platform call: prototyped on Twin AI's internal workflow engine, identified where its grant-automation assumptions broke, and rebuilt standalone as sole developer, owning the full stack and backend API (Next.js, TypeScript).
- Onboarded and mentored the incoming AI Automation Engineer.

AI AUTOMATION ENGINEER — *Mar. 2025 – Oct. 2025*

- Shipped an LLM-powered grant-writing automation platform for 4 enterprise clients, generating submission-ready applications in ~2 minutes vs. days of manual drafting, with expert review as the only remaining step, saving an estimated €360k/yr in labor costs alone, before added grant-application capacity; extended the architecture into an HR candidate-screening system integrated with a client's ATS.
- Owned the full LLM pipeline: requirement parsing, task decomposition, context injection via hand-built Salesforce and Bynder integrations, and an LLM-as-judge stage scoring each section 1–10 against criteria derived from grant requirements and internal metrics.
- Collaborated directly with the CEO and CTO on context-ingestion strategy, per-section prompt design, and data-input structure, decisions that now power the company's main product.

OceansX (UvA Partner Project) — *Amsterdam, Netherlands*

MACHINE LEARNING ENGINEER — *Sep. 2024 – Feb. 2025*

- Led a 4-person team; set targets with the supervising PhD researcher: a working data-collection filter and analysis of what models attend to.
- Converted ~600 hours of interview footage and scraped YouTube content into structured training data via an automated pipeline (BeautifulSoup, Selenium, OpenAI Whisper).
- Built classification models (Random Forest, SVM, BERT) in PyTorch with LIME/SHAP interpretation for well-being research.
- Deployed models to Hugging Face for an interactive demo; won 1st place in the Well-Being track at a competition.

Altai Electronics – OZON Marketplace — *Moscow, Russia*

CO-FOUNDER — *Oct. 2022 – Sep. 2023*

- Built a supply chain across three Chinese manufacturing regions; owned supplier negotiation and pricing; ~€27k revenue at ~60% margins.

Projects

Pesto – Restaurant Ordering & Management System

FULL-STACK DEVELOPER — *2026 – Present*

- All-in-one restaurant platform: QR ordering and payment, POS, kitchen display, inventory with recipe costing, staff roles, analytics.
- OCR + LLM pipeline turning menu photos into structured menus (prices, allergens, nutrition, up to 10 languages), tested against expected JSON.
- Stripe Connect payments with automatic fiscal receipts sent to the tax authority; Next.js PWA, NestJS, PostgreSQL.

Education

University of Amsterdam (UvA) — *Amsterdam, Netherlands*

BSC COMPUTATIONAL SOCIAL SCIENCE – GPA: 8.0/9 — *Sep. 2023 – Jun. 2026*

- Relevant coursework: Mathematics of Machine Learning (optimisation, Bayesian model evaluation, ensemble methods, NLP, time-series); Probability Theory (stochastic processes, sampling distributions); Distributed and Parallel Programming (CUDA in C).

International Baccalaureate (IB) Diploma Programme — *Moscow, Russia*

EUROPEAN GYMNASIUM – TOTAL: 37/45 – HL: MATHEMATICS (AI), BUSINESS & MANAGEMENT, ENGLISH B — *Sep. 2020 – May 2023*

Leadership & Activities

2024 – 2026 **Education Committee Member**, Study Association Bloom (UvA) — *Amsterdam, Netherlands*

2022 **Olympiad Task Creator**, 23 CTF-style security challenges for the Moscow city olympiad — *Moscow, Russia*

Skills

- **Machine Learning / GenAI:** PyTorch, Hugging Face, OpenAI/Claude/Gemini API, Google Cloud OCR, Ollama, LLM-as-judge evals, Claude Code
- **Programming Languages:** Python, SQL, JavaScript, TypeScript, C, HTML/CSS
- **Backend:** Node.js, NestJS, Flask, REST APIs, PostgreSQL / SQLite
- **Front End:** React, Next.js, Bootstrap
- **Tools & DevOps:** Git, Docker, Kubernetes, AWS, Linux (Arch, Ubuntu)
- **Languages:** Russian – Native (C2), English – Advanced (C1), German – Basic (A1)
